DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02/071824 (U.S. 6,884,936 B2 taken as an English Language Equivalent).

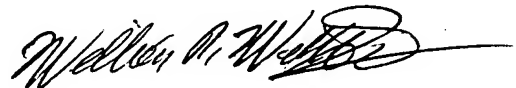

WO '824 teaches as an option a smaller width conductive line width in the center of the plasma screen and a larger one on the side connected to a grounding frame (col. 8, lines 25-65 of U.S. '936). The instant invention claims a conductive mesh with the width of the conductive lines getting wider near the edge of the screen. It would have been obvious to have selected this option from those taught by the reference in order to fully practice the teachings of the reference. The various blackening and antirust features are conventional.
